## MTAConnect's Information Sharing Suite

The Information Sharing Suite is comprised of several software tools that give you unprecedented access to key business information. Each component of the Suite is described below.

The **Document Center** allows you to easily manage all customer, vendor and internal documents in one common area. This feature allows you to quickly search and organize all current and archived documents that drive your business operations. By allowing centralized and easy access to these documents, you will notice less paper on your desk and quicker response to customer and vendor queries. Additionally, numerous inquiries and metric displays allow users to easily drill down into these valuable documents. With access to key business materials at your fingertips, your customers and supplier relationships will be strengthened.

The **Announcement Feature** allows you to effectively communicate with your organization at a company, location or department level. Using Microsoft Word formatting options, you are able to easily grab the attention of your employees. By adding internal or external URLs to your message, you can allow more detail to be shared. You may set announcements to automatically expire on a certain date when they are no longer valid.

The **KPI Control Manager** gives your company access to more than 100 pre-configured metrics that highlight critical business trends at a company, location and/or department level. These metrics allow users to gauge and compare daily, MTD, YTD or period defined performances. You can pick and choose from the available metrics so that only those KPI's that are significant to your business are displayed. The system allows users to click on a metric and drill down for more detailed analysis.

**MTAConnect's Reporting and Inquiry** functions are robust and easy to use. Within the software, the information sharing is keyed off of an intuitive interface to make information available across the enterprise. So-called "actionable information" gives end users the ability to see the dimensionality of their business data, to dynamically change their view of data, and to analyze that data to glean useful business information. In short, actionable information enables end users to customize their business information. MTAConnect's Reporting and Inquiry tools have:

- Easy to use searches, with filters allowing slicing of relevant data
- Security that restricts report distribution to those with a need to know
- Standard reports for the dealership, rental and distribution industries
- Reporting output options, including: Display, Print, Fax, Email and Extract (to Excel)
- Inquiries containing dynamic drill-down from summary level data to detailed information
- Permit user to customize and save their own report selection criteria and sorting formats
- Easy to use ODBC functionality
